

Design and technology leadership

Specialists in the design and manufacture of high technology complex MMI / HMI assemblies for the rail industry

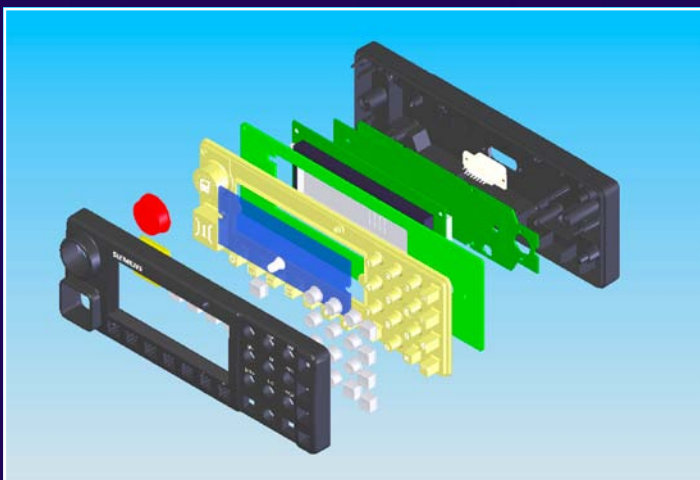

A long-term supply partner to leading European manufacturers of GSM-R equipment for use in the rail industry, IGT Industries brings a wealth of design experience to the project development table.

With core expertise in the fields of display backlighting, touchscreen technology and interface technology integration, IGT is much more than a sub-contract MMI / HMI hardware supplier. Involvement starts early in the design process, when the 'look and feel' of the operator interface can be designed in to an ergonomic, easy to use and functional design.

From the initial contribution to the design process, through assembly to final test, IGT adds value at every stage of the process, delivering fully tested high quality MMI / HMI assemblies on time and on budget.

Contact us for your next development project to see how we can reduce your time to market, minimise your non-recurring engineering charges and optimise the user interface.

- A complete design, prototype and assembly service
- Wide range backlighting control
- Rugged construction meets shock and vibration requirements
- Multiple variants for different national requirements
- Full system integration
- Varied interface options
